

SOLUTION BRIEF

cPacket cClear Control Center (version 25.2.0)

cClear Control Center: Redesigned to Simplify Observability Workflows

As enterprise networks get more complex, operational workflows and tools don't need to be. cPacket has modernized its cClear Control Center to improve the way customers access and use packet data to detect, investigate, and prevent network issues before they become incidents.

Starting with version 25.2.0, cClear has been completely reimaged to provide Network Engineers with more control over the data they see, more flexibility with their dashboards, and more actionable intelligence to accelerate their daily tasks. cClear integrates with the latest Grafana architecture to complement existing workflows and familiar dashboards without interruptions.

Making Sense of Network Data

The new cClear Control Center includes a variety of UX improvements and new dashboards to help customers make sense of their network data.

- **Simplified navigation** with a cleaner interface optimized for high-density data
- **Interactive dashboards** that give engineers more control over the metrics and how they see them
- **More responsive drilldowns** across overview, detail, and conversation views

Highlights

- Accelerates root cause analysis with one-click drilldowns and dynamic dashboards
- Reduces dashboard fatigue by consolidating 56 dashboards to 12 Scenes
- Scales packet-based intelligence without reliance on a few Grafana experts

What's New?

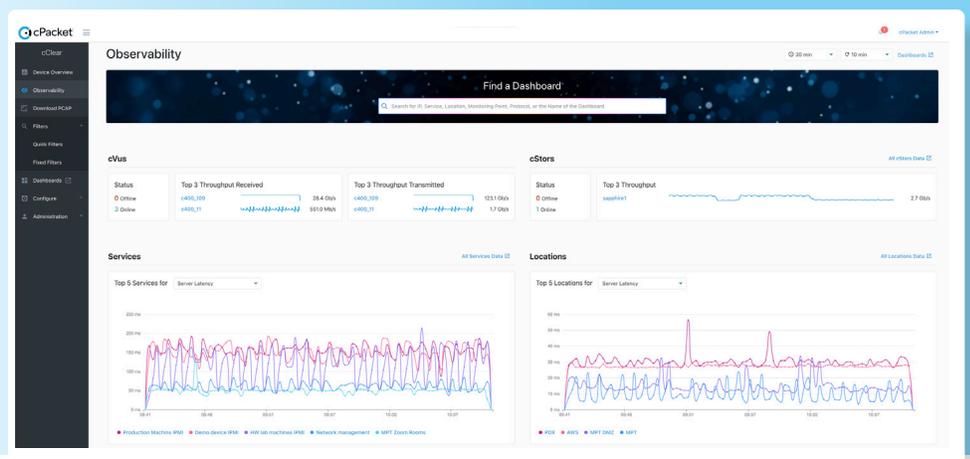

Observability Home Page

A comprehensive summary view that provides a starting point to identify and correlate critical issues

Automatically remembers service and location baselines, so engineers don't have to

Highlights most critical issues, ranked based on their default metrics for latency, connection failures, and throughput

Clearly indicates default time ranges and auto-refresh control at the top of the page

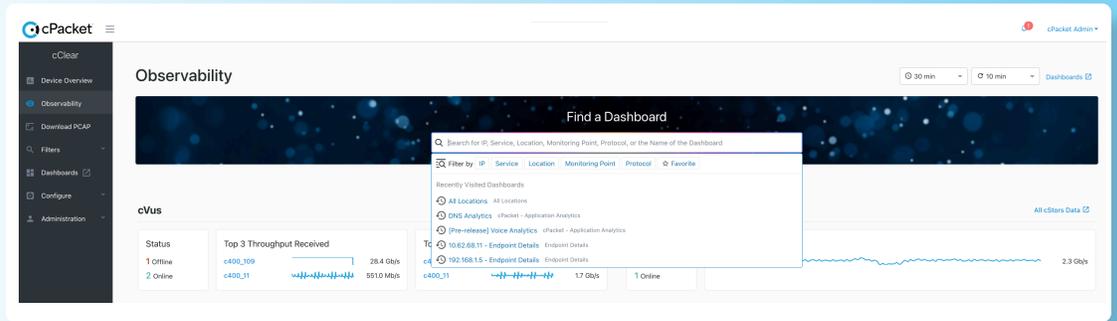

Enhanced Search Capabilities

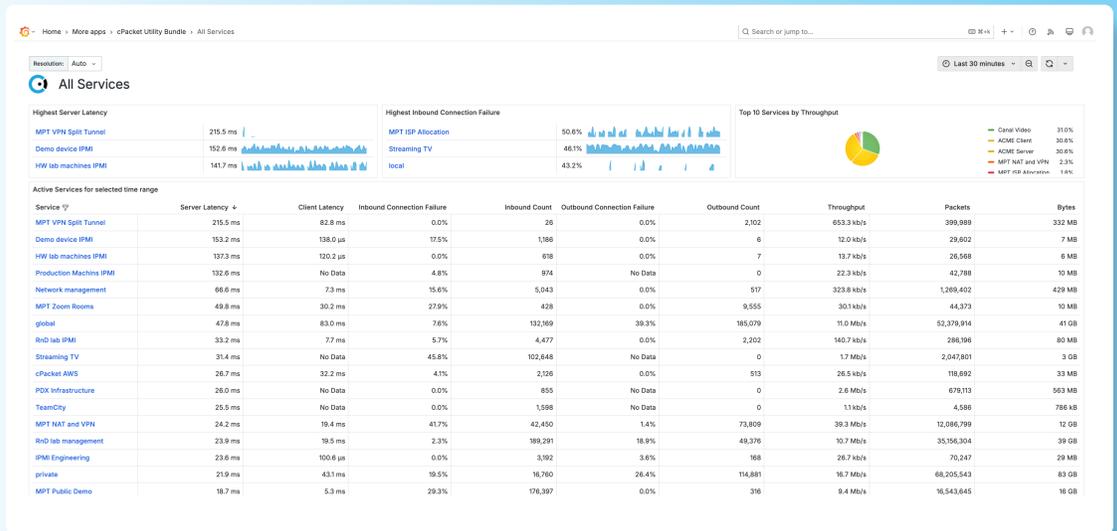

Intuitive search workflows, including open text and filtering

Remembers recent searches to provide a one-click path to commonly visited dashboards

One-Click Drilldowns

Instant access to granular metrics for services, locations, monitoring points, endpoints, protocols, sessions, and more...

For Existing cClear Users

In the new version of cClear, you will notice several improvements in performance, navigation, and data granularity. Most of your observability dashboards (including Device Monitoring, Application Analytics, Flows, and any custom dashboards you've created) will look and function just the same.

Dashboard Architecture Update

Availability

cClear version 25.2.0 is now available for download from the [cPacket Support site](#).

About cClear

cClear Control Center is cPacket's Unified Network Observability Platform. It provides complete visibility of network data on a single pane of glass and enables simple configuration and control of cPacket appliances. It is available as a physical appliance (cClear) and virtualized appliance (cClear-V) – both offering offer the same functionality and interoperability with the cPacket platform.

For any questions, please reach out to your cPacket representative for more information.
